Test Plan

HRMS (Human Resource Management System)

INTRODUCTION

This Test Plan defines the strategy for validating the **HRMS application**. The goal is to ensure that all HR operations—including employee lifecycle management, leave & attendance, compliance, and data security—are accurate, reliable, and aligned with organizational policies and statutory requirements.

TEST OBJECTIVES

- Ensure **100% accuracy** in Employee Data Management (Personal Data, Job, Compensation, Position).
- Validate that **leave, attendance, and workflow rules** comply with the latest 2026 organizational and statutory regulations.
- Confirm seamless and error-free **integration** with dependent modules (Payroll, Finance, ERP).
- Ensure all sensitive employee data (bank details, personal info, IDs) is **fully encrypted and secured**.
- Achieve complete functional and non-functional validation before Go-Live.

TESTING SCOPE

In-Scope

- Employee Master Data Management (Hire → Transfer → Promotion → Exit)
- Leave & Attendance Module
- Organization Structure & Position Management
- Employee Self-Service (ESS) & Manager Self-Service (MSS)
- Workflow Approvals & Notifications
- HR Reports & Compliance Output
- Integration with Payroll, Finance ERP, and Time & Attendance systems

Out-of-Scope

- Leave & Attendance Module
- Organization Structure & Position Management
- Employee Self-Service (ESS) & Manager Self-Service (MSS)
- Workflow Approvals & Notifications
- HR Reports & Compliance Output
- Integration with Payroll, Finance ERP, and Time & Attendance systems

Out-of-Scope

- Recruitment ATS (Applicant Tracking System)
- Third-party biometric hardware
- Performance Appraisal & LMS (Learning Management System), unless HRMS-integrated

TEST APPROACH / STRATEGY

- **Parallel Testing:** Validate HR transactions between legacy HRMS and HRMS for consistency.
- **Boundary Value Analysis:** Test leave balance limits, max/min attendance hours, and workflow role boundaries.
- **Negative Testing:** Invalid employee IDs, unauthorized users accessing restricted modules, improper date entries.
- **UAT (User Acceptance Testing):** Final validation by HR Business Partners and HR Operations teams.

TEST ENVIRONMENT

- **Database:** SQL Server / Oracle with Masked Employee Data.
- **Interfaces:** Payroll, Time & Attendance, ERP Finance.
- **Tools:**
  - *JIRA* – Defect Tracking
  - *Selenium* – Automation Testing
  - *Postman* – API / Interface Testing

ENTRY CRITERIA

- HRMS environment configured and stable.
- All 2026 HR policies (leave rules, attendance cycles, org hierarchy) updated.
- Master data migration completed and validated.
- BRD/FRD baseline approved by stakeholders.

EXIT CRITERIA

- **0 Critical/Major defects** outstanding.
- All High-priority test scenarios executed and passed.
- End-to-end HR lifecycle processed without manual intervention.
- Sign-off from HR Transformation Lead & Compliance Lead.

TEST DELIVERABLES

- HRMS Test Plan & Test Case Repository
- Integration and Workflow Validation Report
- Defect & Status Reports
- Final Test Summary Report (TSR)

ROLES AND RESPONSIBILITIES

- **QA Manager:** Governance, overall planning, and final approval.
- **HR SME:** Verification of HR policy rules, organization structure logic, and compliance.
- **QA Engineer:** Executes functional, regression, and integration test cases.
- **DBA:** Manages data refreshes, environment setup, and masking of sensitive information.

ASSUMPTIONS & DEPENDENCIES

Assumptions

- Necessary access to HRMS modules is provided.
- Integration partners (Payroll, ERP, Attendance vendors) will provide test-ready APIs/files.

Dependencies

- Timely delivery of migrated employee data.
- Availability of HR Policy documents and workflow matrices.

- Stable network connectivity for ESS/MSS and external integrations.

TEST RISKS / ISSUES (

- Retroactive (backdated) changes may slow down system calculations.
- Duplicate or "ghost" employee records may appear after data migration.
- Workflow approvals may fail or route incorrectly.
- Integrations with Payroll/Attendance/ERP may break or delay testing.
- System may slow down during peak HR load (increments, mass uploads).

TEST SCHEDULE

Milestone	Duration	Estimated Dates
Environment Setup & HR Policy Configuration	4 days	March 10 – 14
Functional Testing (HR Core, Leave, Attendance, ESS/MSS)	2 weeks	March 15 – 29
Integration & Workflow Testing	1 week	March 30 - April 5

Setup & HR Policy Configuration		
onal Testing (HR Core, Leave, Attendance, ESS/MSS)	2 weeks	March 15 – 29
Integration & Workflow Testing	1 week	March 30 - April 5

Parallel Run (Legacy HRMS vs HRMS)	5 days	April 6 – April 10
Regression Testing	1 week	April 11 – 17
UAT (HR Operations & Business Users)	1 week	April 18 -24
Final Sign-off & Go-Live Preparation	2 days	April 25 -26

APPROVALS

Head of Payroll/Finance: _____

Date: _____

QA Director: _____

Date: _____

Test Strategy

HRMS – Test Strategy Document

INTRODUCTION

This Test Strategy outlines the overall approach, methods, and standards for validating the Human Resource Management System (HRMS). The objective is to ensure the solution operates reliably across all HR functions—including employee lifecycle management, leave & attendance, workflows, and integrations—before deployment into Production.

BUSINESS BACKGROUND

HRMS is being implemented to streamline HR processes, improve data accuracy, and enhance the employee experience through ESS/MSS capabilities. As HRMS directly influences payroll, compliance, workforce planning, and employee engagement, comprehensive testing is essential to avoid operational disruptions and ensure seamless adoption across the organization.

TESTING GOALS & OBJECTIVES

- Ensure **100% accuracy** in employee master data, leave balances, attendance records, and organizational hierarchy.
- Validate that HRMS workflows, notifications, and approval chains function according to business rules.
- Confirm smooth **integration** between HRMS and dependent systems such as Payroll, ERP Finance, and Time & Attendance.
- Ensure all statutory & audit-related HR reports meet regulatory requirements.
- Guarantee **data privacy and security**, maintaining compliance with internal IT security standards.

SCOPE OF TESTING

- Validate that HRMS workflows, notifications, and approval chains function according to business rules.
- Confirm smooth **integration** between HRMS and dependent systems such as Payroll, ERP Finance, and Time & Attendance.
- Ensure all statutory & audit-related HR reports meet regulatory requirements.
- Guarantee **data privacy and security**, maintaining compliance with internal IT security standards.

SCOPE OF TESTING

In Scope

- Employee Master Data (Hire–Transfer–Promotion–Separation)
- Leave & Attendance Module
- ESS/MSS Features
- Organization Structure & Position Management
- Workflow and Notification Engine
- HR Reports (Compliance, MIS)
- Interface/API validation with Payroll, ERP, Attendance devices

Out of Scope

- Recruitment ATS systems
- Biometric hardware testing

- Performance Management & Learning modules (if not part of release)

TESTING TYPES / METHODS

- **Functional Testing** – Validation against BRD/FRD.
- **Integration Testing** – End-to-end flow across HRMS, Payroll, ERP.
- **Regression Testing** – Ensuring new changes do not break existing functionality.
- **Security Testing** – Validation of role-based access, PII protection.
- **Performance Testing** – Peak load cycles (increments, mass updates).
- **User Acceptance Testing (UAT)** – Business validation by HR Teams.

TEST APPROACH

A **Risk-Based Testing (RBT)** methodology will be adopted. High-risk business areas such as employee master data, leave rules, and workflow approvals will receive maximum coverage, whereas low-risk screens (profile pictures, display preferences) will undergo limited validation.

Testing will be executed in sequential phases: Functional → Integration → Regression → UAT, ensuring stability before advancing to the next stage.

TEST LEVELS

- **Unit Testing** – Performed by developers to validate code-level logic.
- **Integration Testing** – Verification of inter-module & external system interactions.
- **System Testing** – End-to-end HRMS scenarios executed by QA.
- **User Acceptance Testing** – Final validation by HR Operations & Business users.

TEST ENVIRONMENT STRATEGY

- A dedicated **Staging/QA Environment** mirroring Production will be used.
- All PII data will be **masked** before being moved from Production.
- Interfaces with Payroll, ERP, and Attendance devices will be enabled using dedicated test endpoints or sandbox channels.
- Environment availability will be monitored by the Infra/DBA team to avoid downtime during testing cycles.

TEST DATA STRATEGY

- **Synthetic Data** will be created for edge cases (invalid dates, max leave limits, extreme attendance values).
- **Masked Production Data** will be used for realistic scenarios and Parallel Testing.

TEST LEVELS

- **Unit Testing** – Performed by developers to validate code-level logic.
- **Integration Testing** – Verification of inter-module & external system interactions.
- **System Testing** – End-to-end HRMS scenarios executed by QA.
- **User Acceptance Testing** – Final validation by HR Operations & Business users.

TEST ENVIRONMENT STRATEGY

- A dedicated **Staging/QA Environment** mirroring Production will be used.
- All PII data will be **masked** before being moved from Production.
- Interfaces with Payroll, ERP, and Attendance devices will be enabled using dedicated test endpoints or sandbox channels.
- Environment availability will be monitored by the Infra/DBA team to avoid downtime during testing cycles.

TEST DATA STRATEGY

- **Synthetic Data** will be created for edge cases (invalid dates, max leave limits, extreme attendance values).
- **Masked Production Data** will be used for realistic scenarios and Parallel Testing.

and Parallel Testing.

- Data sets will include:
  - Various employment types (Permanent, Contractor)
  - Job levels/grades
  - Multiple attendance & shift variations

DEFECT MANAGEMENT STRATEGY

- All defects will be logged and tracked in **JIRA**.
- Severity Classification:
  - **Critical:** Blocking or data corruption issues
  - **Major:** Core functionality broken
  - **Minor:** UI or non-critical issues
- Daily **Defect Triage Meetings** between QA, Dev, and HR SME.
- Defects must be resolved before moving to UAT and Go-Live stages.

ENTRY CRITERIA

- Test environment stable and configured.
- All integrations activated and tested for connectivity.
- Approved BRD/FRD and finalized test scenarios.
- Test data prepared and validated.

EXIT CRITERIA

- **0 Critical/Major defects** outstanding.
- All High-priority test cases executed and passed.
- End-to-end HR lifecycle executed without errors.
- UAT signed off by HR Business Lead and Project Owner.

RISKS & MITIGATION PLAN

- **Data migration errors:** Validate through parallel comparison and reconciliation.
- **Workflow failures:** Perform multi-level workflow simulations.
- **Integration delays:** Early coordination with Payroll/ERP/Attendance teams.
- **Performance bottlenecks:** Conduct load testing during peak cycles.
- **Incomplete data masking:** Enforce strict data masking policies and pre-checks.

ASSUMPTIONS & DEPENDENCIES

Assumptions:

- All required access and environment credentials will be provided on time.
- HR Policies and workflow matrices are finalized before testing begins.

Dependencies:

- Availability of migrated employee data.
- Timely responses from integration teams (Payroll, ERP, IT Ops).
- Stable environment availability.

ROLES AND RESPONSIBILITIES

- **QA Manager:** Oversees strategy, governance, and final sign-off.
- **QA Engineer:** Executes test cases, logs defects, performs regression testing.
- **HR SME:** Validates business rules, workflows, and statutory logic.
- **Developer/Tech Lead:** Fixes defects and supports integration clarifications.
- **DBA/Infra Team:** Manages test environment and data refreshes.

APPROVALS

- **HR Business Lead:** _____
- **QA Manager:** _____
- **Project Manager:** _____
- **Date:** _____

Risk	Impact	Mitigation
Data migration issues (duplicates, missing records)	Incorrect employee profiles, wrong reporting lines, workflow failures	Perform detailed data validation, reconciliation reports, and parallel comparison
Workflow routing failures	Approval delays, stuck transactions, business interruptions	Conduct multi-level workflow testing and simulate real approval chains
Integration failures with Payroll/ERP/Attendance	End-to-end HR cycle breakdown, inaccurate data sync	Early integration testing, continuous API monitoring, interface validation
Performance slowdown during peak HR cycles	System lag, timeouts, delayed HR processing	Execute load testing and optimize queries/configurations
Security & PII vulnerability	Data breach, compliance	Enforce strict access controls, conduct

ACTIVITY 3

Difference between Test plan and Test Strategy

Test Plan	Test Strategy
A Test Plan is a document that describes *what*	A **Test Strategy** is a high-level document that describes the *overall testing approach* followed across the organization or project.
It is project-specific.	It is **organization-level or project-level** and applies broadly.
Prepared by the Test Lead or QA Manager for a particular project.	Prepared by the **Project Manager or QA Manager** at an organizational or program level.
Focuses on detailed testing activities, resources, schedules, and responsibilities.	Focuses on **testing standards, methods, tools, and high-level processes**.
Dynamic document — can be updated as the project progresses.	Static document — **rarely changes**.
Includes test scope,	Includes **approach, testing standards, risk management, test tools, and methodologies**.

9:38

66

day 6 new

progresses.	changes.
of 17 , test scope,	Includes **approach, testing standards, risk management, test tools, and methodologies.**

Used by the testing team as a practical guide for daily testing tasks.	Used as a **guiding framework** for all test plans in the organization.
Provides task-level details.	Provides **strategic-level direction.**
Defines specific test cases/techniques to be used.	Defines **overall testing techniques and guidelines**, not specific cases.
Narrow focus: Only for one project.	Broad focus: **Applicable across multiple projects.**
